INSTRUCTIONS FOR FINAL CONSUMERS AND SPECIALIZED INSTALLERS	23

CE	This product is certified in accordance with European Community (EC) safety standards.	
RoHS	This product complies with Directive 2011/65/EU of the European Parliament and of the Council, of 8 June 2011, on the restriction of the use of certain hazardous substances in electrical and electronic equipment and with Delegated Directive (EU) 2015/863 from Commission.	•
	(Applicable in countries with recycling systems). This marking on the product or literature indicates that the product and electronic accessories (eg. Charger, USB cable, electronic material, controls, etc.) should not be disposed of as other household waste at the end of its useful life. To avoid possible harm to the environment or human health resulting from the uncontrolled disposal of waste, separate these items from other types of waste and recycle them responsibly to promote the sustainable reuse of material resources. Home users should contact the dealer where they purchased this product or the National Environment Agency for details on where and how they can take these items for environmentally safe recycling. Business users should contact their vendor and check the terms and conditions of the purchase agreement. This product and its electronic accessories should not be mixed with other commercial waste.	
X	This marking indicates that batteries should not be discarded like other household waste at the end of their useful life. Batteries must be delivered to selective collection points for recycling.	•
23	The different types of packaging (cardboard, plastic, etc.) must be subject to selective collection for recycling. Separate packaging and recycle it responsibly.	•
<u></u>	This marking indicates that the product and electronic accessories (eg. charger, USB cable, electronic material, controls, etc.) are susceptible to electric shock by direct or indirect contact with electricity. Be cautious when handling the product and observe all safety procedures in this manual.	

GENERAL WARNINGS

- This manual contains very important safety and usage information. Read all instructions carefully before beginning the installation/ usage procedures and keep this manual in a safe place that it can be consulted whenever necessary.
- •This product is intended for use only as described in this manual. Any other enforcement or operation that is not mentioned is expressly prohibited, as it may damage the product and put people at risk causing serious injuries.
- This manual is intended firstly for specialized technicians, and does not invalidate the user's responsibility to read the "User Norms" section in order to ensure the correct functioning of the product.
- The installation and repair of this product may be done by qualified and specialized technicians, to assure every procedure are carried out in accordance with applicable rules and norms. Nonprofessional and inexperienced users are expressly prohibited of taking any action, unless explicitly requested by specialized technicians to do so.
- Installations must be frequently inspected for unbalance and the wear signals of the cables, springs, hinges, wheels, supports and other mechanical assembly parts.
- Do not use the product if it is necessary repair or adjustment is required.
- When performing maintenance, cleaning and replacement of parts, the product must be disconnected from power supply. Also including any operation that requires opening the product cover.
- The use, cleaning and maintenance of this product may be carried out by any persons aged eight years old and over and persons whose physical, sensorial or mental capacities are lower, or by persons without any knowledge of the product, provided that these are supervision and instructions given by persons with experienced in terms of usage of the product in a safe manner and who understands the risks and dangers involved.

- Children shouldn't play with the product or opening devices to avoid the motorized door or gate from being triggered involuntarily.
- If the power cable is damaged, it must be replaced by the manufacturer, after-sales service or similarly qualified personnel to avoid danger.
- •The device must be disconnected from the electrical network when removing the battery.
- Ensure that blocking is avoided between the actuated part and its fixed parts due to the opening movement of the actuated part.

WARNINGS FOR TECHNICIANS

- Before beginning the installation procedures, make sure that you have all the devices and materials necessary to complete the installation of the product.
- You should note your Protection Index (IP) and operating temperature to ensure that is suitable for the installation site.
- Provide the manual of the product to the user and let them know how to handle it in an emergency.
- If the automatism is installed on a gate with a pedestrian door, a door locking mechanism must be installed while the gate is in motion.
- Do not install the product "upside down" or supported by elements do not support its weight. If necessary, add brackets at strategic points to ensure the safety of the automatism.
- Do not install the product in explosive site.
- Safety devices must protect the possible crushing, cutting, transport and danger areas of the motorized door or gate.
- Verify that the elements to be automated (gates, door, windows, blinds, etc.) are in perfect function, aligned and level. Also verify if the necessary mechanical stops are in the appropriate places.
- •The control board must be installed on a safe place of any fluid (rain, moisture, etc.), dust and pests.
- You must route the various electrical cables through protective tubes, to protect them against mechanical exertions, essentially on

the power supply cable. Please note that all the cables must enter the control board from the bottom.

- If the automatism is to be installed at a height of more than 2,5m from the ground or other level of access, the minimum safety and health requirements for the use of work equipment workers at the work of Directive 2009/104/CE of European Parliament and of the Council of 16 September 2009.
- Attach the permanent label for the manual release as close as possible to the release mechanism.
- Disconnect means, such as a switch or circuit breaker on the electrical panel, must be provided on the product's fixed power supply leads in accordance with the installation rules.
- If the product to be installed requires power supply of 230Vac or 110Vac, ensure that connection is to an electrical panel with ground connection.
- •The product is only powered by low voltage satefy with control board (only at 24V motors).
- Parts/products weighing more than 20 kg must be handled with special care due to the risk of injury. It is recommended to use suitable auxiliary systems for moving or lifting heavy objects.
- Pay special attention to the danger of falling objects or uncontrolled movement of doors/gates during the installation or operation of this product.

WARNINGS FOR USERS

- Keep this manual in a safe place to be consulted whenever necessary.
- If the product has contact with fluids without being prepared, it must immediately disconnect from the power supply to avoid short circuits, and consult a specialized technician.
- Ensure that technician has provided you the product manual and informed you how to handle the product in an emergency.
- If the system requires any repair or modification, unlock the automatism, turn off the power and do not use it until all safety

conditions have been met.

- In the event of tripping of circuits breakers of fuse failure, locate the malfunction and solve it before resetting the circuit breaker or replacing the fuse. If the malfunction is not repairable by consult this manual. contact a technician.
- Keep the operation area of the motorized gate free while the gate in in motion, and do not create strength to the gate movement.
- · Do not perform any operation on mechanical elements or hinges if the product is in motion.

RESPONSABILITY

- Supplier disclaims any liability if:
 - Product failure or deformation result from improper installation use or maintenance!
 - ·Safety norms are not followed in the installation, use and maintenance of the product.
 - Instructions in this manual are not followed.
 - · Damaged is caused by unauthorized modifications
 - In these cases, the warranty is voided.

The **MC60** is a control board with built-in radio control system, developed for the automation of sliding, sectional gates, barriers or 24V electromechanical bollard.

02. CONTROL BOARD

• Power Supply	20 Vac
• Flashing light's output	24VDC 4W Max.
• Lock output	12Vdc 3W Max.
• RGB Flashing light's output	24Vdc 100mA Max.
• Motor's output	24Vdc 180W Max.
 Auxiliary accessories output 	24V DC 8 W Max.
 Security device output and push button 	24V DC
• Working temperature	-25°C to + 55°C
 Incorporated Radio Receiver 	433,92 Mhz
• Compatible remote controls	12bits or Rolling Code
• Maximum Memory Capacity	100 (full opening) - 100 (pedestrian opening)
Control Board Dimensions	130x107 mm
• Fuse F1	16AL 250V
• Fuse F2	1.6AL 250V

03. CONNECTION SCHEME

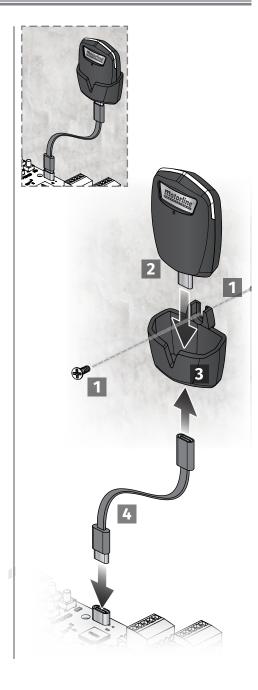

04. INSTALLATION

INSTALLATION OF MCONNECT LINK (OPTIONAL)

04. INSTALLATION

The installation process assumes that the gate already has mechanical or electrical limit switches installed. For more information read the motor's manual.

01 • Connect all accessories according to the connections diagram.

02 • Connect the control board to a 20V power supply

03 • Check if the gate movement is the same as shown on the display:

88	88	If the display does not match the movement of the gate, switch off the power supply control board and change the wires
CLOSE	OPEN	of Motor (8 and 9) and check the direction of the limit switches.

04 • Make a manual course programming - menu **P0** (page 16A).

05 • If necessary, adjust the slowdown time of the gate at opening and closing - menu **P1** (page 16B).

06 • Adjust motor force and sensitivity - menu P2 (page 16B).

07 • Make a manual programming of the course again - menu P0 (page 16A).

08 • Enable or disable the use of Photocells in menu **P5 and P6 (page 17B and 18A)**.

09 • Program a remote control (**page 14A**).

The control board is now fully configured!

Check the pages of the menu programming if you want to configure other features of the Control board.

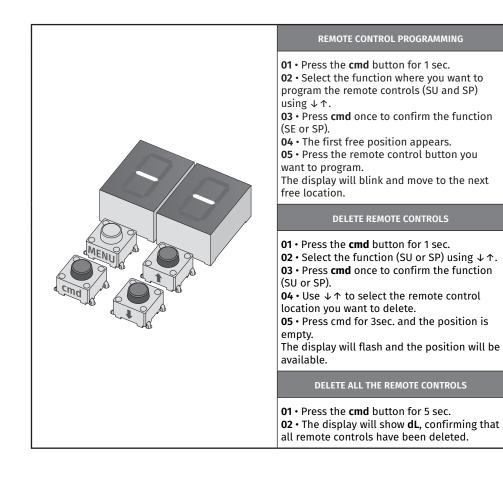

1

REMOTE CONTROLS

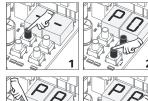

50	58
Programming a remote control for full opening	Programming a remote control for pedestrian opening

Whenever you store or delete a remote control, the display will flash and show the next position. You can add or delete remote controls without go back to point 01.
If you do not press any button for 10 seconds the control board will return to standby.

We can only go into programming with the gate electrically stopped.

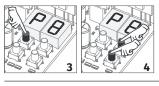

The functions of the control board are divided into 2 areas:

04. INSTALLATION

"P" MENU

- **1** To access the P menu press the MENU button for 1 sec.
- **2** Use $\downarrow \uparrow$ to navigate through the menus.
- 3 Press MENU when you want to confirm access to a menu.
- 4 Press $\downarrow \uparrow$ simultaneously to exit programming.

"E" MENU

- 1 To access the E menu press the MENU button for 5 sec.
- **2** Use $\downarrow \uparrow$ to navigate through the menus.
- 3 Press MENU when you want to confirm access to a menu.
- **4** Press ↓ ↑ simultaneously to exit programming.

Remote Programming Operation (PGM ON):

06 • Press MENU to save the new value.

00 function disabled 01 function activated

Enables or disables the soft start. With the soft start function activated, at each start of movement the control board will control the motor start, increasing the speed gradually in the first second of operation.

(Default value 01)

01 • Press MENU for 5 sec. until it appears $\mathcal{B}\mathcal{B}$.

- **02** Use UP until appears $\mathcal{B}\mathcal{B}$.
- **03** Press MENU will appear BB.
- 04 Press MENU to edit the value.

- 05 Use UP and DW to change the value.
- 06 Press MENU to save the new value.

06. PROGRAMMING "E"

E.II HUMAN PRESENCE/PUSHBUTTON

• Press the buttons indicated in the image simultaneously for 10 seconds

and the flashing light will flash (the 1st free position appears in the display).

Each time you store 1 remote control, the control board will exit remote

programming. If you want to memorize more remote control, you will

always have to repeat the process of pressing the remote controls buttons

simultaneously for 10 seconds for each new remote control.

RP **P**P EB00 (disables human presence) 00 (disables pushbutton mode) Allows you to define the way Whenever a order to is sent to the Operation of the LB input LO input and the motor performs a 01 (active pushbutton mode) complete maneuver. 00 (disables input to emergency stop device) LS LO Human presence 01 (active at closing) 01 (input for 01 Full Full The motor only works if you keep emergency stop) ACTIVE closing opening the LS button pressed. 02 (input for twilight Pedestrian Full Human presence opening opening 02 (active during opening and closing) during the day). The motor only works if you keep (NOTE: This option is only the LO or LS button pressed depending on the desired action. /!\ When human presence active, the RF remote controls do not work. (Default value (Default value 00) SC=00; SE=01; BR=00; PL=02)

sensor - outputs for LEDs that work at night and remain off available in the PL version)

01 • Press MENU for 5 sec. until it appears $\mathcal{B}\mathcal{B}$.

- **02** Press MENU until appears \mathcal{HB} . Use UP or DW to navigate the parameters.
- 03 Press MENU to edit the chosen parameter value.
- 04 The factory set time appears. Use UP and DW to change the value.
- 05 Press MENU to save the new value.

06. PROGRAMMING "E"	$\mathcal{E}\mathcal{C}$ courtesy light time / pre-flashing lamp			
88		88		
Allows to adjust the courtesy light time. The courtesy light is activated the set time when the gate is in the closed, opened and stopped position.		This menu allows you to define the time (from 1 to 99 seconds) that the flashing lamp remains active before the start of each maneuver.		
The E2 menu will only be availal		tesy light function is activated in the P8 menu e page 19B).		
	Default v	value (00)		
 01 • Press MENU for 5 sec. until it 02 • Use UP until appears & 03 • Press MENU will appear & 	appears 80			

- 04 Press MENU to edit the value.
- 05 Use UP and DW to change the value.
- 06 Press MENU to save the new value.

EE.

00 function disabled 01 function activated after opening The control board activates the closing only after completing the opening, based on the time defined in the $E \hat{\alpha}$ function

02 function activated during opening The control board activates the closing after

completing the opening, when, during opening,

the user/object passes through the photocells, based on the time defined in the Eu function

This menu allows activating the Follow me option.

With this function activated, whenever the

safety device detects the passage of a user/

object, the control board activates the closing maneuver based on the time selected in this parameter. Allows to activate the electronic brake and change the behaviour of the LK output (lock)

88	00 (disables electronic brake) 01 (activates electronic brake) Allows you to activate the electronic brake.	Default value (00)
88	00 (activates lock at opening 100ms) 01 (activates lock with polarity) 02 (Pre-activation of the lock on the opening - 100 msec.) 03 (Deactivates electromagnet during opening and while it is open with pre- deactivation of 1 sec. before starting to open. Activates the electromagnet during closing and while it is closed.)	Default value (00)
01 • Pre 02 • Us	ess MENU for 5 sec. until it appears 80. e UP until appears 85.	

03 • Press MENU will appear abla B. Use UP or DW to navigate the parameters.

- 04 Press MENU to edit the chosen parameter value.
- **05** The factory set time appears. Use UP and DW to change the value.
- **06** Press MENU to save the new value.

06. PROGRAMMING "E"

E. 4 COURSE TIME ADJUSTMENT

Allows to adjust the working time for the opening and closing courses at normal speed

88	88	88	88	
Opening course time at normal speed (minutes)	Opening course time at normal speed (seconds)	Closing course time at normal speed (minutes)	Closing course time at normal speed (seconds)	
(Default value 0)	(Default value 10)	(Default value 0)	(Default value 10)	

- **01** Press MENU for 5 sec. until it appears $\mathcal{E}\mathcal{B}$.
- 01 · Use UP until appears E.
- **02** Press MENU will appear aa. Use UP or DW to navigate the parameters.
- **03** Press MENU to edit the chosen parameter value.
- 04 The factory set time appears. Use UP and DW to change the value.
- **05** Press MENU to save the new value.

Motorline

88

01 - 09 closing time function

Allows you to define the waiting time between detection and the start of the closing maneuver after the safety device detects the passage of an object/user.

(Default value **00**)

01 • Press MENU for 5 sec. until θ appears.

- $\mathbf{02} \boldsymbol{\cdot} \mathsf{Press}\;\mathsf{MENU}\;\mathsf{until}\; \mathcal{E}\mathcal{B}$ appears. Use UP or DW to navigate parameters.
- ${\bf 03} \boldsymbol{\cdot} \textsc{Press}$ MENU to edit the value of the chosen parameter.
- **04** Choose the desired value. Use UP and DW to change the value.

05 • Press MENU to save the new value.

 \wedge

E. 7 manuevers counter

This menu allows checking how many complete maneuvers were performed by the control board (complete maneuver means opening and closing).

Resetting the control board does not clear the maneuver count.

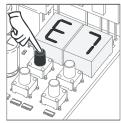

Example: 130371 maneuvers 13- Hundred thousand / 03- Thousands / 71- Dozens

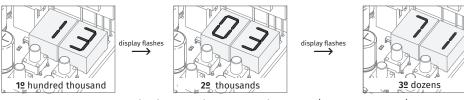

02 · E0 appears. Press UP until appears E7.

03 · Press MENU.

04 • The maneuvers count is displayed in the following order (example: 130 371)

05 • E8 appears.

06. PROGRAMMING "E"

Resetting the control board does not erase the maneuver count.

Anomaly	Procedure	Behavior	Procedure II		Discovering the or	igin of the problem	
• Motor doesn't work.	• Make sure you have power supply connected to the automatism and if it is working.	• Still not working.	• Consult a MOTORLINE technician.	 Open control board and check if it has power supply. Check input fuses of the control board. 	3 • Disconnect motor from control board and test it by connecting directly to 12/24V power supply in order to find out if it has the problems.	4 • If the motor works, the problem is on the control board. Pull it out and send it to our MOTORLINE technical services for diagnosis.	5 • If the motor doesn't work, remove from installation site and send it to our MOTORLINE technical services for diagnosis.
• Motor doesn't move but makes noise.	• Unlock the motor and move the gate/ barrier/automatic bollard by hand to check for mechanical	• Encountered problems?	• Consult a qualified technician in gate/ barrier/automatic bollard.	Check all motion axis and associated motion systems related with the gate/barrier/ automatic bollard (wheels,	racks, etc) to find out what is the problem.		
	problems.	• The gate/barrier/ automatic bollard moves easily?	• Consult a MOTORLINE technician.	 If the motor works, the problem is with control board. Pull it out and send it to our MOTORLINE technical services for 	diagnosis. 2 • If the motor doesn't work, remove it from installation	site and send it to our MOTORLINE technical services for diagnosis.	
• Motor opens but doesn't close.	• Unlock the motor and move the gate/ barrier/automatic bollard by hand to closed position. Block the motor again. Turn off power supply for 5 seconds, and reconnect. Send order to open using remote control.	• The gate/barrier/ automatic bollard opened but didn't close again.	 Check if there is any obstacle in front of the photocells. Check if any of the control devices (Key Selector, Pushbutton, Video Intercom, etc.) are stucked and sending permanent signal to control board. Consult a MOTORLINE technician. 	All control boards MOTORLINE have LEDs that easily allow to conclude which devices are with anomalies. All safety device (DS) LEDs in normal situations remain ON. All "START" circuits LEDs in normal situations remain Off. If LEDs devices are not all On, there is some security systems malfunction (photocells, safety edges). If "START" LEDs are on, there is some command issuing device emitting a permanent signal.	 A) SECURITY SYSTEMS: 1 · Close with a shunt all safety systems on the control board. If the automated system starts working normally check for the problematic device. 2 · Remove one shunt at a time until you find the malfunction device. 3 · Replace it for a functional device and check if the motor works correctly with all the other devices. If you find another one defective, follow the same steps until you find all the problems. 	 B) START SYSTEMS: 1 · Disconnect all wires connected to the START connector (LO and LS). 2 · If the LED turned OFF, try reconnecting one device at a time until you find the defective device. 	NOTE: In case procedures described in sections A) and B) don't result, remove control board and send it to our MOTORLINE technical services for diagnosis.
• Motor doesn't make complete course.	• Unlock the motor and move the gate/ barrier/automatic bollard by hand to check for mechanical	• Encountered problems?	• Consult a qualified technician in gate/ barrier/automatic bollard.	Check all motion axis and associated motion systems related with the gate/barrier/ automatic bollard (wheels,	racks, etc) to find out what is the problem.		
	problems.	• The gate/barrier/ automatic bollard moves easily?	• Consult a MOTORLINE technician.	 If the motor doesn't work, remove it from installation site and send it to our MOTORLINE technical services for diagnosis. If the motor works well and move gate at full force during the entire course, the problem is with control board. Set force using trimmer on the board. Make a new working time programming, giving suffient 	 time for opening and closing with appropriate force. 3 • If this doesn't work, remove control board and send it to MOTORLINE technical services. NOTE: Setting force of the control board should be sufficient to make the gate open and close without stopping, but should stop and 	invert with a little effort from a person. In case of safety systems failure, the gate shall never cause physical damaged to obstacles (vehicles, people, etc.).
